AB - J58140013 New ointment contains allantoin as main component, carboxyvinyl polymer, and H₂O, and is adjusted to pH5.5 or under. Allantoin is easily hydrolysed to glyoxylic acid and uric acid with acid, and to allantoinic acid with alkali. E.G., allantoin content is reduced to under 90% by long-term storage at over pH5.5. This ointment is usable and stable without contg. surfactant.

- Ointment can contain skin-protecting agent (e.g., vaseline, cetyl alcohol, palmitic acid), humectants (e.g., glycerol, sorbitol), antiseptic (e.g., methyl hydroxybenzoate, benzalkonium chloride, boric acid), perfumes and pigments.(0/0)

IW - STABILISED ALLANTOIN OINTMENT CONTAIN CARBOXY POLYVINYL POLYMER WATER
SLIGHT ACIDIC PH

IKW - STABILISED ALLANTOIN OINTMENT CONTAIN CARBOXY POLYVINYL POLYMER WATER

SLIGHT ACIDIC PH
